

Q1

MULTIPLE
CHOICE

Please note that this survey does not cover the ASCOM Camera interface. We know this area is in a state of flux, and we expect to make additions to the API to accommodate the new sCMOS technology and its needs. Also ASCOM Camera does not apply to planetary high speed imaging. So please help us with your experiences with the *other* ASCOM APIs.*

Q4

MULTIPLE
CHOICE

Do the existing ASCOM APIs cover all of your application's *operational* needs for *those* devices?*

If not please help us by providing additional detail. This is a core value for us. By "operational" we mean the things your users need in order to do astronomy - routine usage.

Q5

MULTIPLE
CHOICE

How important is it that device-specific features are managed within a user interface provided by the manufacturer?*

Do you want the manufacturer to take full responsibility for the device's controls while providing you a standard ASCOM interface for operational use?

Q10

MULTIPLE
CHOICE

How important is it to avoid the need to use proprietary interfaces to control device-specific features?*

If you include device-specific controls, you are responsible for understanding, documenting, and supporting that aspect of the device.

Q11

MULTIPLE
CHOICE

Are you aware of **Action/SupportedActions** feature that is present in all ASCOM APIs?*

Actions enable arbitrarily complex commands and data to be sent between ASCOM applications and drivers.

SupportedActions provides a means to discover which Action names are implemented by a driver . Effective use of this feature requires agreement on action names and data structures between application and driver authors.

Q17

ESSAY

Do you have any other brief feedback to pass along to our team relating to the ASCOM APIs? If the issue is complex, please post it to the [ASCOM Driver and Application Development Support Forum](#) .

July 8, 2019 8:26 PM

Briefly, I think that some telescope drivers want to do many of the operations that clients need to do. This creates a lot of confusion and subtracts time from computer resources and makes everything less stable.

June 8, 2019 2:36 PM

I have been very happy with the ASCOM through the years! The team does an excellent job of staying on-top of evolving hardware and user needs.

June 6, 2019 11:13 PM

Keep up the good work!

Keep trying to get equipment manufacturers to develop and maintain ASCOM drivers, rather than volunteer/best able efforts.

Pressure Diffraction Limited/SBIG to write ascom camera drivers for their cameras!

June 6, 2019 4:03 PM

This is not very clear how this work with 64 bit native applications, I have the feeling that many old ASCOM driver cannot do this but I have no idea how this can be documented...

Also in the past huge issues with non English PCs (figures formatting and "." and "," issues) and ascom drivers.

May be the ascom validator takes care of this today ?

Indeed I may ask something that I have been fixed already, I'm sorry if this is the case.

June 4, 2019 4:41 AM

Keep up the great work! SGP would likely not exist without ASCOM...and it certainly wouldn't be as feature rich if we had to spend the vast majority of our time supporting hardware we don't readily have access to!
